

InfraBuild

Building futures through sustainable steel

Environmental Policy

InfraBuild operations include metal recycling, the manufacture of intermediate and finished steel products, and the distribution and sale of metal products. We seek to improve business sustainability by ensuring that environmental, social and economic matters are fundamental considerations in our decision making.

We are committed to pursuing a high standard of environmental management throughout our operations. We strive to continually improve our environmental performance, including through the increasingly efficient use of resources, and minimising our environmental footprint.

This policy applies to anyone employed or engaged by a InfraBuild company and subsidiaries, including employees (whether permanent, fixed term or temporary), contractors, secondees, agents and directors "you".

Consistent with this we will:

- Manage policy implementation, facilitate stakeholder understanding and be committed to continual policy maintenance and improvement.
- Identify, establish, review and monitor measurable environmental objectives and targets to assist in continually improving environmental performance, particularly having regard to evolving community expectations, management practices, scientific knowledge and technology;
- Use energy, water and other resources more efficiently, including through our emphasis on local scrap metal recovery and recycling;
- Use green, renewable long-term sources of power where practicable;
- Promote and continually improve the environmental credentials of InfraBuild, our operations, our products and their application;
- Comply with applicable environmental laws, regulations and mandatory standards. To the extent such laws, regulations and standards do not exist, develop and apply appropriate internal standards that reflect our commitment to minimise our environmental footprint;
- Communicate with relevant governments and communities directly affected by our operations, and contribute to the development of policies, legislation and regulations that may be relevant to InfraBuild operations;
- Control and manage environmental risks arising from our operations by developing, implementing and reviewing systems to identify, assess, control and monitor those risks;
- Clearly assign accountabilities and responsibilities for environmental management and compliance with applicable environmental standards to personnel at all levels within our business, from the senior management team through to all staff and contractors;
- Ensure that all of our workers and contractors are appropriately trained so that they understand our environmental management systems and standards, and our collective responsibility for ensuring that we achieve and maintain high environmental management standards; and
- Inform relevant workers, contractors and suppliers of goods and services to InfraBuild managed sites of their obligations regarding this policy, to manage policy implementation, facilitate stakeholder understanding and be committed to continual improvement in our environmental management systems, processes and outcomes.

Francisco Irazusta
CEO and Executive Director
